

## BillingPlatform Digital Commerce

# Enabling Secure Digital Payment Processes

As enterprises grow and expand their reach, the shift to an online e-commerce model of exchanging complex offerings for digital payments is putting extreme pressure on existing processes and technologies. At the heart of the issue is the ability to quickly and easily utilize preferred regional or industry vertical payment gateway providers.

The virtual equivalent of a credit card machine, a payment gateway is a portal to accepting online payments (everything from card payments to direct debit payments to payments via online wallets).

BillingPlatform provides a solution to solve this problem. With the industry's first "payment gateway framework", BillingPlatform offers an API-based common integration framework that allows payment partners the ability to plug directly into the solution. This gives enterprises the flexibility to scale their business as they grow while simplifying payment integration.

The BillingPlatform payment gateway framework offers these benefits to growing enterprises:

- ✓ Simplifies the integration with the provider of choice through secure APIs
- ✓ Quick rollout of new payment functionality
- ✓ Monitor the entire payment journey
- ✓ Easy reconciliation between financial systems

As the industry leading cloud-based billing and revenue management solution, BillingPlatform provides full lifecycle support of the monetization process – from data management, product setup, quoting, billing and invoicing, revenue recognition, through payment and collections – all on a secure, next-generation cloud platform. The unparalleled flexibility of the platform puts enterprises in control of how they differentiate in the market, maximize profitability, reduce operational costs and improve the customer experience.
